transform design mockups into dynamic, interactive interfaces.

Projects

English Academe Junior

English AcadeMe Junior is a movie-based English program designed for children aged 6 to 12, enhancing communicative competence through engaging content. Aligned with CEFR standards (Pre A1–A2), it offers project-based learning with Soft CLIL, interactive tools like avatars and badges, and comprehensive teacher resources, including lesson plans and guides.

Indesign Inc

InDesign is an online platform that connects clients with vetted interior designers to create personalized spaces. The service offers a streamlined process, including a quick onboarding wizard, designer selection, and comprehensive project management through a user-friendly dashboard. Clients can choose from various design packages tailored to their style and budget, ensuring a customized experience from concept to completion.

Apollo-e

Apollo-e is a suite of carrier/dispatcher applications developed using a monorepo architecture. This suite consists of various interconnected applications designed to provide seamless experiences for carriers and dispatchers. The applications within Apollo-e streamline the process of coordinating and managing logistics operations, optimizing efficiency and ensuring smooth operations in the transportation industry.

Etesal

Etesal Health is a React-based application that serves as a bridge between pharmacies and freelance pharmacists, facilitating the hiring process. This application enables pharmacies to connect with and hire freelance pharmacists easily and efficiently, providing a platform for seamless collaboration in the healthcare industry.

Pakmedic

A mobile app developed with React Native, Node, and Python, offers telemedicine, Stripe payments, doctor/patient app, machine learning for image classification, video/audio calling, real-time messaging with sockets, medical classification chatbot, and a web-based admin panel.
